THRUSTPRO DRYER

The Ryko ThrustPro is the perfect companion to any wash system. In fact, when combined with a Ryko automatic rollover vehicle wash system, a location's throughput can as much as double with a corresponding increase in revenue. This merchandising technique is popular because it provides the same services as a tunnel operation but requires only half of the equipment space.

The ThrustPro Dryer features a Top Follower that operates on the same principle as a hovercraft. The back pressure of the air lets the follower float over the car, just inches from the surface. Two powerful side fans complete the drying process on the sides of the vehicle.

SLIMLINE DRYER

2 and 3 Fan Models

The Slimline Dryer from Ryko allows car wash operators with limited bay space to offer revenue-increasing drying services. The Slimline can be retrofitted at locations that already have a wash system or can accompany an original purchase. The Slimline dryer features heavy-duty construction and supports 2 or 3 high-efficient fan motors.

The powerful motors direct a high volume of ambient air over the surface of the vehicle, removing the remaining water for a customer pleasing dry.

Dryer options

THRUSTPRO DRYER OPTIONS INCLUDE:
